TITLE : An Intelligent Vendor Evaluation and Performance Prediction System Using Hybrid Deep Learning

DOMAIN : Deep Learning (Artificial Intelligence / Machine Learning)

GUIDE NAME : Mrs. B. Sivasankari, M.TECH., ASSISTANT PROFESSOR

ABSTRACT :

Vendor evaluation is essential for selecting reliable suppliers based on factors such as quality, cost, delivery, and service. Traditional evaluation methods are often manual, time-consuming, and unable to accurately predict future vendor performance.

This project proposes an intelligent vendor evaluation and performance prediction system using deep learning. The system analyzes historical vendor data to evaluate performance, predict future outcomes, and rank vendors based on key performance indicators. The proposed solution improves decision-making, reduces manual effort, and enhances supply chain efficiency. It also supports **SDG 8 – Decent Work and Economic Growth** by promoting efficient and sustainable business operations. It helps organizations build reliable supplier relationships, reduce operational inefficiencies, and encourage long-term economic development.
